

Eric Bertero

Junior Cybersecurity Analyst · Security Operations

(365) 739-6667 · Oakville, ON · eric@ebertero.com · [linkedin.com/in/ericbertero](https://www.linkedin.com/in/ericbertero)

About me

Junior cybersecurity analyst with hands-on security operations experience in **threat monitoring, phishing investigation, vulnerability management, and SOC 2 access reviews**. Daily operator on **CrowdStrike Falcon, Sumo Logic, and Tenable Nessus**, backed by strong systems fundamentals across Windows Server, Linux, Active Directory, and Entra ID, and by **Python** automation of recurring security tasks. **CompTIA Security+** and **CySA+** certified. Available full-time from January 2027.

Technical skills

Cybersecurity: CrowdStrike Falcon (EDR) · Sumo Logic (SIEM) · Tenable Nessus · Mimecast · FlareVM · phishing and email header analysis (SPF/DKIM/DMARC) · IOC threat hunting · vulnerability management · system hardening and baselines · SOC 2 access reviews · ServiceNow

Systems & Identity: Active Directory · Microsoft Entra ID · Microsoft Intune · Authentik (OIDC, SSO/MFA) · Windows Server 2025 · Ubuntu Server and Linux CLI · Proxmox VE · Docker · RAID configuration

Network & Cloud: Microsoft Azure · Cloudflare Zero Trust (DNS, Tunnels) · WireGuard · Tailscale · OpenWrt · Pi-hole DNS filtering · VPN administration · network troubleshooting · next-generation firewall evaluation (Palo Alto)

Automation & Development: Python · Bash · REST API integrations · Azure DevOps · n8n workflow orchestration

Professional experience

IT Support Specialist (Co-op)

Sept 2024 – Jan 2025 | Apr 2026 – Aug 2026

United Van Lines – Mississauga, ON

- Executed **user access reviews across ~100 employee accounts** in preparation for a **SOC 2 audit**, validating entitlements against role requirements, flagging stale accounts and excessive permissions, and compiling evidence for auditors.
- Investigated **phishing threats**, managed quarantined email, and built a company-wide **security awareness training program** delivered to 100 employees.
- Partnered with the System Administrator and senior leadership to evaluate new enterprise security technologies — **Palo Alto next-generation firewalls** and **Splunk** log aggregation — contributing comparative analysis to purchasing decisions, and led the resulting document-management migration to **Foxit** for 100 users at a **50% licensing saving**.
- Enrolled corporate devices in **Microsoft Intune** and deployed **50+ workstations** (Windows 10 to 11 migration), bringing endpoints under centralized management with a standardized configuration baseline.
- Built and racked a physical server from bare metal, configuring a **RAID 6** array and deploying **Windows Server 2025**, then completing post-install configuration and validation.
- Resolved **60+ tickets per week** across remote and on-site support, alongside systems work in network troubleshooting, user permission management, and server maintenance.
- Authored **SOPs and technical documentation** and coordinated the technical side of employee onboarding and offboarding, including account provisioning and hardware inventory.

Jr. Security Administrator (Co-op)

January 2025 – April 2025

MCAP – Waterloo, ON · Security Operations team

- Monitored enterprise security tooling daily — **CrowdStrike Falcon** (EDR), **Tenable Nessus**, **Mimecast**, and **Sumo Logic** (SIEM) — for threat detection, vulnerability scanning, and incident response.
- Developed **automated scheduled searches in CrowdStrike Falcon** to detect and alert on suspicious activity, reducing time to identify anomalous events.
- Built custom **Sumo Logic queries** using lookup tables for **proactive IOC threat hunting** across the corporate environment.
- Created a **Python script automating quarterly system hardening audits**, integrating the **Azure DevOps API** to apply exceptions and calculate compliance levels across multiple operating systems.
- Investigated **phishing alerts** from Mimecast and Outlook, collecting and detonating artifacts in an isolated **FlareVM** environment, and escalated confirmed incidents to the security team.
- Tracked and closed security tickets in **ServiceNow**, ensuring timely remediation of vulnerabilities and policy violations.
- Managed assets and identities through **SolarWinds**, **Microsoft Azure**, and **Active Directory**.

Projects

AI-Driven Cyber Range & Corporate IT Simulator

In Progress

Authentik (OIDC) · n8n · Ollama · Zammad · Docker · Proxmox VE

- Designing an autonomous training environment simulating a **50–100 user company** across **4 physical nodes** and **8+ containerized services**, for hands-on detection-and-response and identity administration practice.
- Configured **Authentik as an OIDC identity provider** delivering single sign-on and MFA across Nextcloud, Vaultwarden, and a **Zammad** service desk, with **bulk user provisioning** through the REST API in place of manual account creation.
- Built **n8n** workflows that query a locally hosted **Ollama** model to generate realistic employee personas and **10–15 tickets per day** across **4 scenario categories** (credential resets, shared-resource access requests, phishing reports, software faults), delivered via the Zammad and Nextcloud Talk APIs.
- Every scenario demands real remediation — group and ACL troubleshooting, investigation of suspicious email against DNS and endpoint logs, privileged credential provisioning — reproducing the daily workflow of a service desk and a SOC.
- Roadmap: **Wazuh** for centralized log collection, alerting, and detection-rule tuning against the simulated attacks.

Self-Hosted Security Lab — Zero Trust Access & Identity

Ongoing

Proxmox VE · Docker · Cloudflare Zero Trust · OpenWrt · Tailscale

- Operate a **four-node lab** (three **Proxmox VE** hypervisors on Ubuntu Server and a dedicated **OpenWrt** router), running all services as **Docker** containers managed through Portainer.
- Publish services across two owned domains using **Cloudflare Tunnels**, eliminating inbound port-forwarding and direct WAN exposure; remote administrative access secured with **Tailscale** and **WireGuard**.
- Network-wide DNS filtering with **Pi-hole** against malicious and tracking domains, and centralized credential management in a self-hosted **Vaultwarden** instance.

Phishing Email Analyzer

Python

- Built a **Python tool with a Tkinter GUI** that ingests messages through the **Gmail API** and automatically analyzes them for phishing indicators.
- Performs **header analysis** (SPF, DKIM, DMARC) to verify sender authenticity, flags social-engineering keywords, suspicious attachments, and URL shorteners, and cross-references extracted URLs against a database of known malicious links.
- Calculates a weighted **risk score** (low/medium/high) to classify phishing probability and prioritize review.

Certifications

CompTIA CySA+ — Cybersecurity Analyst

May 2025

Issued by CompTIA] · Valid through May 2028

CompTIA Security+

June 2024

Issued by CompTIA · Valid through May 2028

Splunk Core Certified Power User

In Progress

Issued by Splunk · Target exam date: 9/30/26

Education

Advanced Diploma: Software Development & Network Engineering

Sept 2023 – Dec 2026

Sheridan College — Oakville, ON

Interests

Home lab building and self-hosting · Following emerging security tooling and threat research · Travel and languages · Gym and outdoor sports
